

FISH EXCLUSION SCREENS

PUMP INTAKES - GRAVITY OFFTAKES - FISH DIVERSIONS

AWMA introduce to the Pacific Region; innovative, field proven designs for fish protection and/or debris control.

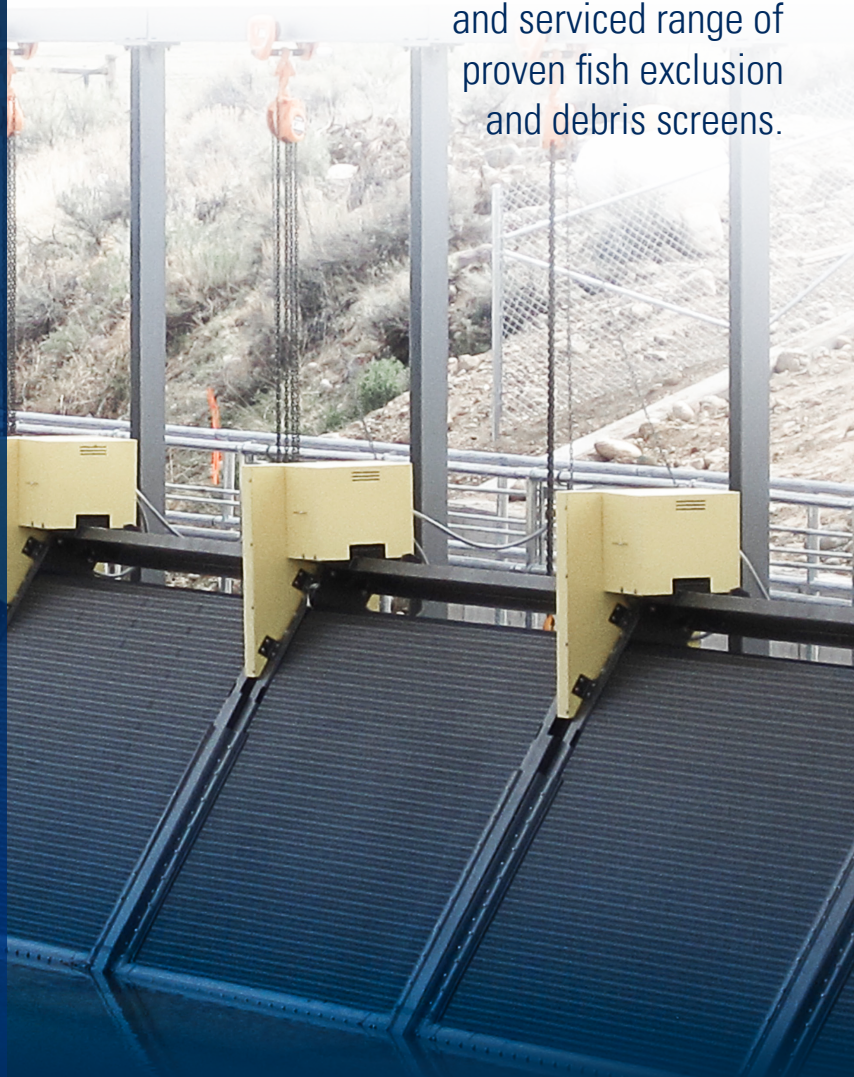

FEATURES

- Innovative self-cleaning screen system
- Manufactured to suit all pump and gravity offtake capacities
- Suitable for sensitive, abrasive and/or corrosive environments
- Various size screen slots depending on the application (down to 1mm)
- Durable, robust construction methods and materials
- Customisable
- Automation options
- International design with 20+ years' proven performance

BENEFITS

- Innovative cleaning system increases efficiencies, lowers maintenance and improves water quality
- Full compliance with regulations for native fish protection as well as other aquatic life
- Low whole of life cost, long product life
- Excludes debris as well as aquatic flora and fauna
- Improved water quality results in reduced filtration maintenance
- Lower pumping costs from increased pump efficiencies
- Decrease pump system maintenance
- Construction withstands impact from debris without damage
- Custom designed to best meet client screening and operational requirements
- Install on new or retrofit to existing infrastructure
- Local customer service and support

Overcome screening challenges with AWMA's locally manufactured and serviced range of proven fish exclusion and debris screens.

APPLICABLE FOR:

- Irrigation diversions
- Urban water intakes
- Hydro power facilities
- Debris dense waterways
- Water extraction facilities
- Cooling water intakes
