

WATER CONTROL EQUIPMENT FOR ENVIRONMENTAL WATER

AWMA specialise in the design and manufacture of water control infrastructure for the Australian and export markets.

Most of Australia's environmental projects have been delivered by AWMA, including catchment management solutions, fish ways, artificial wetland flooding, flow regulation, flood mitigation, weir upgrades, fish exclusion screens and trash screens.

AWMA has played an integral role in the development of innovative, site specific solutions for the majority of MDBA's environmental works.

AWMA's range of customised and innovative solutions include water control gates, actuation systems, power supply (portable, solar or mains), control and monitoring software, volumetric flow algorithms, SCADA integration and intake screens.

A unique approach to design ensures AWMA solutions are developed in partnership with our clients, ensuring superior results.

When you are considering your next environmental water project please contact AWMA to benefit from design consulting services that will assist with operational efficiencies, ease of maintenance, low whole of life costs and environmentally sustainable outcomes.
