

AUTOMATED WATER CONTROL SOLUTIONS FOR IRRIGATION MODERNISATION

AWMA specialise in delivering major irrigation modernisation programs.

Working closely with project partners, AWMA develop and deliver scalable and sustainable water control solutions for increased operational efficiencies, improved safety measures and essential water savings.

All AWMA equipment is based on commercial 'off-the-shelf' (COTS) technology allowing flexibility and increased opportunities for future development.

AWMA's irrigation modernisation programs incorporate manual and automated water control gates, metered outlets, on-farm riser outlets, control and management software, volumetric flow algorithms, support, training, maintenance and service contracts, software integration, upgrades and on-going system development.

When you consider your next irrigation project please contact AWMA to benefit from design consulting services that will assist with operation and maintenance options, gate selection, civil structure interface and automation systems. AWMA have vast experience to assist you to develop practical solutions.
